

X-BYKES

The X-bykes are great for tackling hills and going longer distances without the effort. For trips of a few miles there is no need to use the pedals at all! The X-bykes are sleek silver alloy bikes powered by Lithium Ion batteries. They have the appearance of stylish pedal bikes as the battery is not large and clumsy in design and the power is delivered by throttle on the handlebars – the same as the trike. Similarly, they can reach speeds of 15mph and the battery, when fully charged, can last for 20 miles in the right conditions. What's more - as long as you are over 14 you can ride one without a licence or tax or insurance - it's no wonder so many people are using these bikes to commute instead of expensive cars.
